

Jose Roberts

providence, ri • 401-230-9100 • Webterpr@gmail.com • linkedin.com/in/jose-roberts • https://www.therpipproject.com/

Data and AI architect with 15+ years building data platforms and production AI systems across finance, consumer services and industrial IoT. Databricks Certified Data Engineer Professional with deep AWS, Python, and Spark experience. Track record of taking systems from architecture through delivery, and leading the engineers who build them.

SKILLS

Programming Languages: Java, JavaScript, Python (3.x)

Frameworks: Flask/FastAPI/Django, React/Vite/NextJs, Spring Boot

Databases: MongoDB, MSSQL, MySQL, PostgreSQL

Cloud Platforms: AWS, Databricks, GCP, Microsoft Azure

DevOps & Containerization: CI/CD Pipelines, Docker, Kubernetes, Terraform

Competencies: Agile/Scrum, Algorithms (sorting, graph traversal, etc.), Data Structures

Testing & Debugging: Debugging Tools, Test Driven Development TDD, Unit Testing

Tools & Technologies: Claude Code, Cursor, Generative AI, Git, GitHub, LLMs, OpenAI

WORK EXPERIENCE

MojoTech • Providence • 01/2026 - 07/2026

Data and AI Architect • Full-time

Key architect and builder of robust, scalable, and efficient data pipelines using Databricks and AWS services, working directly with clients to understand their AI and data needs.

- Designed Agentic data ingestion using Databricks to support internal visibility into LLM consumption.
- Created a framework used to test AI Model performance across a variety of tasks, enabling model selection.
- Integrated and automated data pipelines and APIs using Databricks for a Fortune 500 company, enabling the use of AI agents across their work streams and driving 72% growth of their analytics platform.
- Developed Agentic workforce that automated workflows and managed tasks reducing operational errors by 30% and bottlenecks by 77%.

Very Technology • Remote • 07/2021 - 08/2025

Manager of Data Science and Data Engineering

Led teams of engineers emphasizing product ownership and scalable solutions integrating LLMs and generative AI.

- Directed the integration of LLMs and Generative AI into existing systems, enhancing operational efficiency by 80% within 2 months through strategic planning.
- Engineered event-driven backend that enabled advanced marketing strategies, boosting sales profits by 33% within 3 months through optimized data flow.
- Consulted on the design of an AI-first system, resulting in improved data driven decision making processes that increased user productivity by 90% within 3 weeks.
- Developed and deployed an AI agent that enhanced technician efficiency by 22% within 1 month, leveraging a fine-tuned model for real time guidance.
- Developed a full-stack AI-driven application for creative marketing content, increasing user engagement by 40% and profits by 15% within 1 month through innovative design.
- Managed Team of data scientists and data engineers and promoted growth and development.
- Architected real-time API platform achieving 99.99% uptime with sub-5 second end-to-end latency for IoT data.

Evonik Industries • Mobile, AL • 01/2019 - 07/2021

Sr DATA ENGINEER • Full-time

Created and designed the full lifecycle of data pipelines to support niche Data Science segment to drive decisions.

- Designed and implemented the backend system architecture that supports the needs of the Data Scientists and Analysts.

- Implemented machine learning forecasting model for energy consumption reducing costs by 2M in one year.
- Led initiatives to define and find new technology stacks for data engineering and data science.
- Reduced deployment time of data pipelines and solutions by implementing best practices and automation.
- Performed data integration, reducing redundancies by 80% and decreasing overhead in projects by 50%.
- Trained junior Data Engineers, increasing their readiness and effectiveness in projects by 80%.
- Increased the scope of observability of production plants by recommending smart instrumentation products.

Amazon Robotics • North Reading, MA • 04/2018 - 01/2019

DATA ENGINEER

Developed and maintained data pipelines used by the Deployment Engineering division of Amazon Robotics.

- Trained predictive modeling algorithm preventive maintenance reducing downtime by 83%.
- Implemented real time data processing analytics monitoring dashboards for Deployment Engineers.
- Redesigned performance metrics, increasing accurate project tracking and productivity (Python/AWS).
- Worked on IoT optimization of data backend to automate data collection which reduced costs by 10% in one month.
- Standardized and revised data model for Deployment Engineering data pipelines improving the extensibility.

Bank of America • Riverside, RI • 02/2011 - 04/2018

SR DATA ENGINEER/ANALYST - AVP

Participated in business reviews to improve data workflows and increase the accountability and usability of the data.

- Designed and implemented the metadata repository for the Finance group within the Bank.
- Engineered data extraction algorithms to process data and integrate disparate systems (Python/JAVA).
- Developed RESTful APIs to improve data retrieval and data capture (JAVA/Node JS/REST/JSON/SQL).
- Overhauled processes through algorithms and machine learning creating 68% efficiency (JAVA/Python/SQL).
- Improved management of deposits account data allowing recovery of billions of dollars (JAVA/Rest).
- Used business intelligence and analytics tools to perform reviews on deposit accounts, recovering billions of dollars.

CERTIFICATIONS

Databricks Certified Data Engineer Professional • 05/2026 - 05/2028

Databricks

AWS Certified Solutions Architect - Associate

AWS

TinyML certification

Harvard edX

EDUCATION

Master's of Science in Computer Science

Colorado Technical University Online • GPA: 3.95 • 07/2016 - 12/2017

Bachelor of Arts in Political Science

University of Rhode Island • Kingston RI • 09/2005 - 05/2009
